

HAZARDS WE COULD FACE WHEN DOING TRAIL CLEANUP

IN THIS DAY AND AGE DRUG USAGE IS VERY HIGH ALL OVER THE COUNTRY! UNFORTUNATELY THE MAKERS OF METH USE THE SIDE OF THE ROADS/TRAILS AS A DUMPLING PLACE!

Dangers of Meth to Me ?

- ▶ Highly Volatile mixture (Explosive)
- ▶ Highly reactive to moisture and temperature changes
- ▶ Toxic fumes from manufacturing process and leftover chemicals
- ▶ Hazardous Material cleanup needed for the area.

Meth Lab's are portable

What to look for...

What do I do...

- ▶ Stop... Isolate the area call 911
- ▶ Give a detailed description of what you see
- ▶ **Don't touch, Kick, Dump out, ect. Remember this is an Explosive Hazardous Material !!**
- ▶ Stay with the item until patrols arrive at a safe distance.

The Club would like to thank Robert Mackenzie III from Lewis County Fire and Emergency Management for his presentation and these slides.
